SUMMARY

Early-career AI/ML and Agentic AI engineer with hands-on experience building multi-agent workflows, RAG pipelines, and FastAPI-backed LLM services. Focused on multi-agent orchestration, backend delivery, and production-grade agent systems, directly relevant to AI Engineer, ML Engineer, and Applied AI Engineer roles.

PROJECTS

MedInsight Agent - Agentic RAG Medical Assistant github.com/hariom-dhakar/MedInsight-Agent

- Built a Self-RAG-based medical assistant with a full ingestion pipeline: document parsing, chunking strategy design, and semantic retrieval over a ChromaDB vector store.
- Implemented LLM Observability grounding strategies to constrain generation to retrieved context and reduce hallucinated medical claims.
- Built the backend in FastAPI with modular LLM agent workflows Gateway, separating retrieval, reasoning, and response-generation stages for easier debugging and iteration.

AI Proposal Agent - Production Multi-Agent Proposal Generation System github.com/hariom-dhakar/AI-Proposal-Agent

- Architected a production-grade system with 7 specialized agents handling document analysis, content generation, and proposal structuring via governed, sequential LangGraph handoffs.
- Built the stack end-to-end: FastAPI backend, Gemini Groq LLM inference with fallback, FAISS for retrieval, ReportLab for automated PDF generation, and MongoDB for persistence.
- Designed backend APIs supporting multi-enterprise document processing.

EDA Analyzer - CrewAI Multi-Agent Data Analysis Tool for ML Engineers

- Designed a CrewAI-based multi-agent system automating exploratory data analysis, with dedicated agents for task routing, tool execution, and result synthesis.
- Integrated LLM reasoning to auto-generate visualizations, statistical insights, and natural-language reports from raw datasets for ML engineers Reduced manual analysis effort by approximately 70% compared to a fully manual EDA workflow.

TECHNICAL SKILLS

Languages: Python, C++, SQL

AI / LLM: Agentic AI, Multi-Agent Systems, RAG, LLM Gateway & Evals, LLM Observability (RAGAS, Langfuse), Vector Databases, LangChain, LangGraph, CrewAI, Transformers, Fine-Tuning (LoRA QLoRA), PyTorch, TensorFlow

Frameworks: FastAPI, Scikit-Learn, Pandas, NumPy, REST APIs

Databases & Tools: MongoDB, MySQL, FAISS, ChromaDB, Databricks, Docker, Kubernetes, Git, Postman, Hugging Face, Azure

EXPERIENCE

AI Engineer - Celebal Technologies Feb 2026 – Present

- Designed and built a CrewAI-based multi-agent EDA Analyzer for ML engineers, automating data cleaning, feature analysis, and reporting – reducing manual analysis effort by approximately 70%.
- Integrated LLM reasoning into the analyzer to generate business-relevant insights and natural-language summaries from raw datasets.
- Built scalable FastAPI services powering the underlying data processing and automated reporting pipelines.

ACHIEVEMENTS

- Databricks Certified Generative AI Engineer Associate.
- Solved 500+ DSA problems on LeetCode, HackerRank, and Coding Ninjas; earned 4-Star Problem Solving Badge on HackerRank.
- Led Arya Cipher Coding Club and organized Hack AryaVerse 2025 hackathon.

EDUCATION

B.Tech in Computer Science Engineering 2022 – 2026

Arya College of Engineering & IT, Jaipur CGPA: 7.70
